

Adding a new ig account

For the succeeding steps, we'll be using the sample ig account: **fritzhausen**

Step 1:

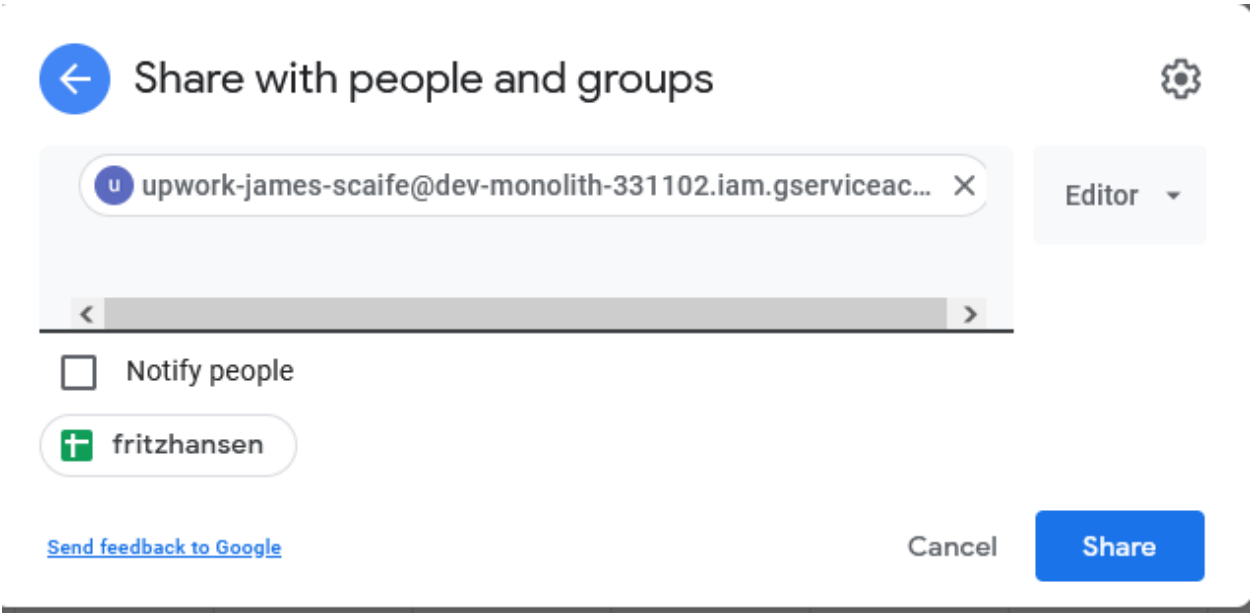

Create an empty google sheet and rename title to **fritzhausen**.

Step 2:

Share the sheet to this bot email and set as editor, you need to notify since it is a bot:

upwork-james-scaife@dev-monolith-331102.iam.gserviceaccount.com

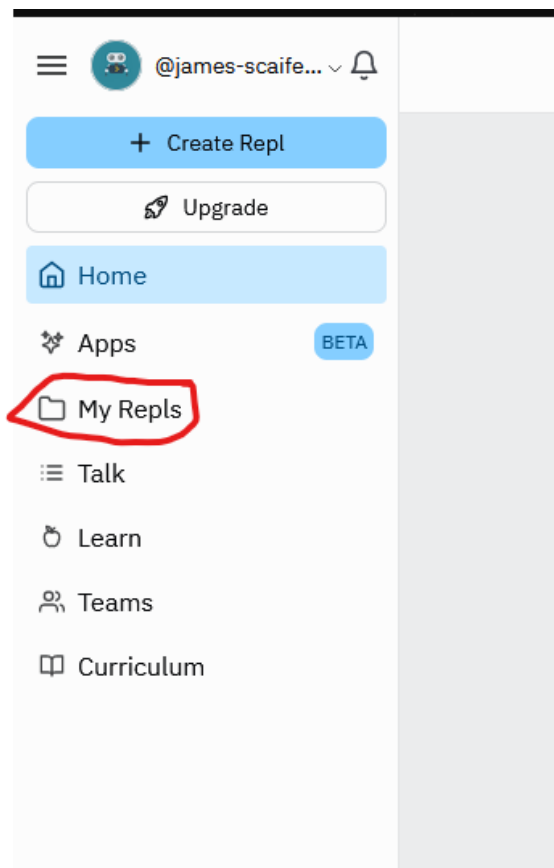

Step 3:

Open this website then click on My Repls:

<https://replit.com/~>

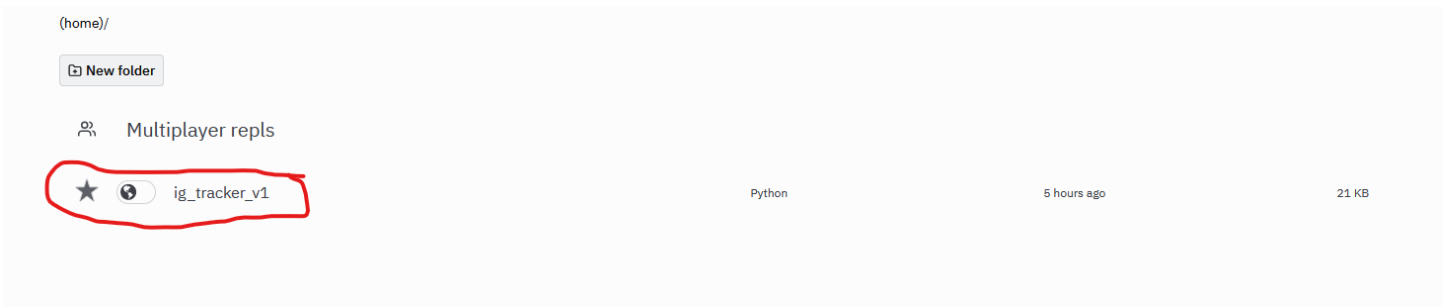

Username: jamesscaifeupwork@gmail.com

Password: upwork2021

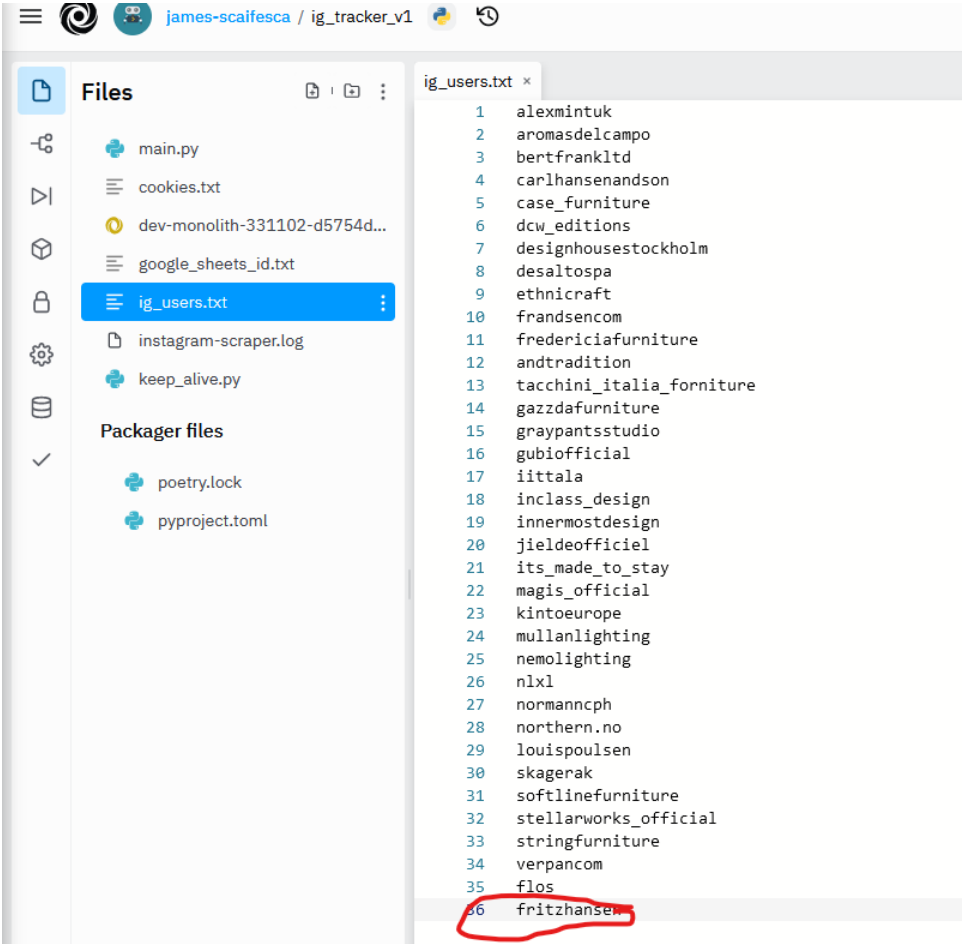

Step 4:

Click on ig_tracker_v1

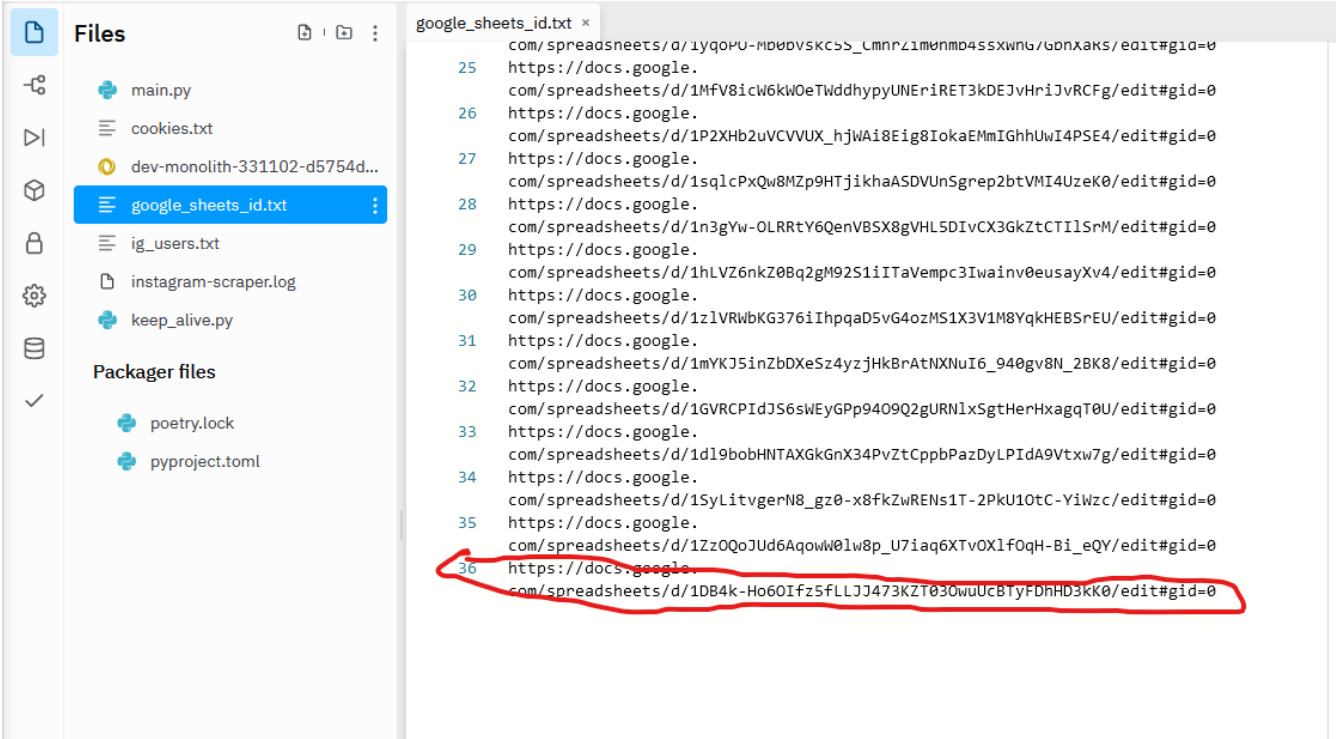

Step 5:

Click on ig_users.txt and add in the new ig username at the very bottom.

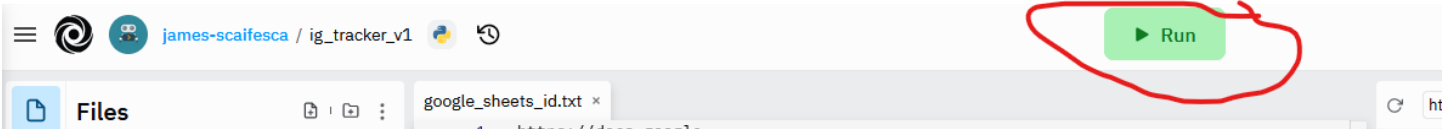

Step 6:

Click on google_sheets_id.txt and add in your newly created sheet link

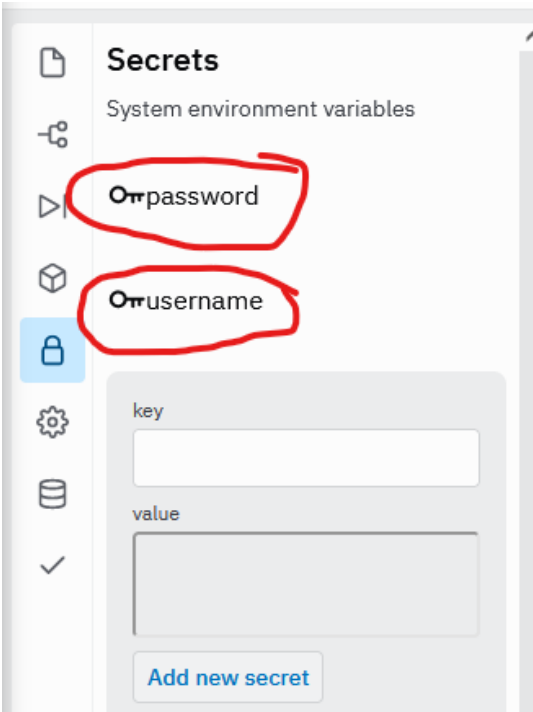

Step 7:

Click on RUN and it should now run forever.

Step 9:

If you want to use a different Instagram account as scraping tool then put in credentials on the environmental variables as shown (this is needed if you want to scrape an account that is private but is followed by your Instagram account).

.....

DO NOT CHANGE ANYTHING ELSE BESIDES THESE TEXT FILES. The rest of the codebase cannot be change as this might cause you errors.

.....

Step 8:

Go to <https://uptimerobot.com/>

Username: jamesscaifeupwork@gmail.com

Password: upwork2021

This just monitors the server if it is running, you can designate an email add to receive notifications.
